

Identikey Server 3.1

Out-of-the box robust software authentication server for enterprise security: a simple addition to the existing infrastructure.

Static passwords are the weakest link in any security infrastructure, as they can be easily guessed, stolen, and misused. Two-factor authentication has proven to be the best countermeasure against hacker attacks and password fraud. VASCO's solutions replace insecure static passwords with dynamic One-Time Passwords, thus introducing a higher level of security to the organizations of all sizes.

NEXT-GENERATION SOFTWARE AUTHENTICATION SERVER

Identikey® Server 3.1 is the next-generation centralized authentication server that supports DIGIPASS® strong authentication on the backend. It verifies authentication requests from individuals trying to access the corporate network or business applications and centrally administers user authentication policies.

FITS VARIOUS ENTERPRISE IT ARCHITECTURES

Built around VASCO's core VACMAN® authentication platform, Identikey Server 3.1 is flexible yet robust enough to offer the highest level of security in an admin-friendly package. Developed using industry standards for data communication, it is a good fit for large and small enterprise network security implementations. Identikey Server 3.1 works well with most remote access tools such as SSL-VPN, Firewalls, Intranets, Extranets, and a variety of web applications. It can run on Windows and Linux platforms without causing any of the headaches commonly associated with the maintenance of two-factor authentication systems.

ROBUST

Supports remote user load from ten to tens of thousands. Server failover and database replication available.

SCALABLE

Adding more users and/or applications is as simple as purchasing more licenses.

SIMPLE INSTALLATION

Offers an intuitive installation wizard to guide through the setup process from start to finish.

EASY MANAGEMENT

Offers a single web-based admin interface. This centralised management tool is accessible via any web browser from anywhere on the network allowing for remote administration and bringing new opportunities for outsourced service providers.

PAINLESS ROLLOUT

Built-in automated deployment function reduces the helpdesk involvement. Identikey Server 3.1 offers tools to facilitate a smooth rollout or migration from existing products including Data Migration, Dynamic User Registration, Provisioning for software and mobile authentication, Password Auto Learn, Bulk Management, Auto assign, and others.

LOW TOTAL COST OF OWNERSHIP

Runs seamlessly on the existing infrastructure and does not require dedicated servers or appliances. Existing databases do not need to be replaced as the data storage can be integrated in Active Directory or in a variety of ODBC compliant databases.

COMPLIANCE TOOL

Extensive reporting functionality together with the security audit function can provide crucial input for helpdesk, compliance, and accounting purposes.

FAMILY CONCEPT

Supports all existing and future VASCO's hardware, software, SMS, zero footprint, and mobile DIGIPASS authenticators to satisfy the needs of various end user groups.

KEY FEATURES

Centralized user management

- Web-based admin GUI
- Microsoft Management Console Administration (MMC)

Automated deployment function

- Bulk and auto management
- Dynamic user registration
- Flexible assign procedures for DIGIPASS authenticators
- Policy-based authentication
- Password auto learning

Comprehensive audit and reporting system

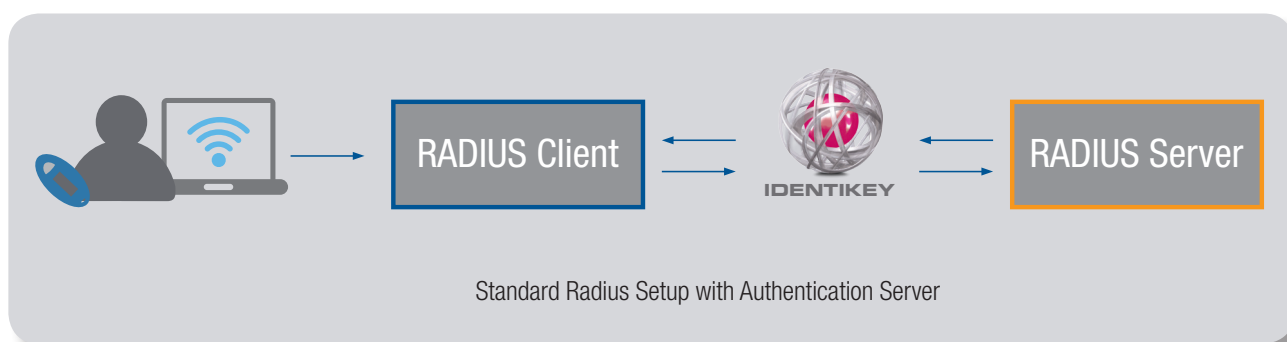

- The audit console monitors incoming and outgoing RADIUS and web traffic
- Extensive XML or HTML-formatted reporting for helpdesk troubleshooting, system and security auditing, and accounting
- LDAP lookup and authentication on AD, ADAM, and eDirectory
- Security audit function

Compatibility

- Compatible with a wide range of products from leading network equipment manufacturers
- Performance of existing servers and applications is not affected
- Supports RADIUS and web server environments
- Compatible with most firewalls and access servers
- Works well with browser-based applications such as Citrix Web Interface, SharePoint, Web mail access such as OWA, and others

Multi-platform support

- Can be used on most common Server Operating Systems such as MS Windows and Linux, both in 32 and 64 bit
- ODBC compliant database support
- Active Directory integration

About VASCO

VASCO® is a leading supplier of strong authentication and e-signature solutions and services specializing in Internet Security applications and transactions. VASCO has positioned itself as global software company for Internet Security serving customers in more than 100 countries, including several international financial institutions. VASCO's prime markets are the financial sector, enterprise security, e-commerce and e-government.
