

# aXs GUARD Gatekeeper

**A full scale authentication appliance, the aXs GUARD Gatekeeper is the most cost-effective authentication appliance on the market, targeted for the SME market. Optional modules allow you to organize your total network connectivity security in a structured and integrated method.**

## **STRONG USER AUTHENTICATION IN AN APPLIANCE**

Built around VASCO's solid and proven VACMAN core technology, aXs GUARD offers strong user authentication for any Radius client, and allows the administrator to set policies and rules for any Radius client.

The built-in synchronization with Microsoft Active Directory and Novell e-Directory ensures easy setup and configuration. The web-based interface allows you to access this authentication appliance from any browser.

## **MODULAR STRUCTURE**

On top of the aXs GUARD Gatekeeper authentication appliance, you can add up to 8 different modules to help integrate complex security functions based on your company's needs. The additional modules can be activated at any given time. Collectively, these modules provide the most comprehensive security solution on the market. The seamless integration of these modules ensures a carefree solution that is easy to master and can be activated at any time.

## **APPLICATION FIREWALL**

The application firewall for http(s) and ftp allows you to quickly integrate strong user authentication to your websites and protects web servers against various internet hacks.

When strong user authentication is applied to Outlook Web Access or Citrix, it provides User Pass-through.

## **FIREWALL WITH DMZ AND IPS**

With today's systems operating 24x7 and broadband connections now commonplace, your risk of exposure is increasingly high. aXs GUARD's Intrusion Prevention and SPICT Firewall offers protection against sophisticated hack attacks and ensures that your confidential information stays confidential.

## **CONTENT SCANNING WITH ANTI-SPAM AND ANTI-VIRUS**

Security needs vary with each company; sometimes even between departments and users with different levels of authority for web and mail. The content scanning module allows you to set the security for each user, defining limitations of who can surf where and when, and provides statistics of all visited sites. Full activity logging, reporting and monitoring capabilities will minimize your liability in the event of illegal employee activity.

Save time and money by eliminating unsolicited email from entering your employees' mailboxes. aXs GUARD's Filter Controls eliminate time-wasting junk mail (Spam), restrict internet downloads and quarantine resource-consuming or potentially damaging email attachments such as '.exe', '.bat', '.mp3', etc. files. Through SPAM scores you can fine-tune the way mail is quoted per user/mailbox. Before mail is released to the mail server, it has already been checked by basic antivirus scans.

## **TREND MICRO ANTI-VIRUS AND ANTI SPYWARE PROTECTION**

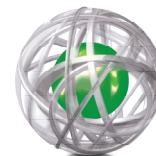

Secure email is vital for efficient business communications. A virus can infect your system, resulting in several costly days of downtime. All Internet traffic passing through the Proxy or mail-relay server is scanned for viruses, spyware, phishing, content, etc. by Trend Micro's Anti VIRUS, Anti SPYWARE and Anti PHISHING module. aXs GUARD's Trend Micro Anti-Virus checks the most recent virus tables every 15 minutes to secure your network from the latest threats.

## **REMOTE CONNECTION AND SSL-VPN**

Virtual Private Networks (VPNs) provide the freedom to work securely from home or abroad with full access to system resources. VPNs are ideal for linking distributed enterprises and supporting mobile workers. SSL-VPN allows users to securely connect to applications from any computer via a standard web browser.

## **MAIL SERVER**

If you don't own your own e-mail server, this module can be activated on the aXs GUARD Gatekeeper for a quick and easy way to set up your own mail server for all your needs, including webmail. (Not available on AG 5526.)

### AUTHENTICATION MODULE

Authentication makes it possible to link surf, mail, firewall and VPN access rights to the user/group instead of a computer/network. The single sign-on program uses the network logon from MS Windows or Linux to authenticate a user on aXs GUARD. Synchronization with Active Directory and Novell e-Directory saves time.

### EASY SETUP

aXs GUARD's easy set up and user friendly, web-based interface make managing your communications a breeze.

### LOW OPERATING COST

aXs GUARD achieves low Total Cost of Ownership with highly reliable hardware, add-on modules, and competitive support contracts. Three hardware models allow you to choose your connectivity needs. Our unique performance categories allow upgrades for an incremental price increase. No need to swap systems and no risk of losing data.

### AUTOMATED MAINTENANCE AND SUPPORT

Administrative tasks are reduced with automated backups ensuring your latest configuration is always available.

Automated updates provide the aXs GUARD GATEKEEPER with the latest software version and virus updates without user intervention.

Maintenance contracts allow you to upgrade on the fly, to more powerful models at only the price difference.

### HARDWARE

Available models:

AG 3504: With 4 Gigabit interface and a SATA hard disk of 500 GB for logging and mail

Supports Performance categories A/B/C/D/E

AG 5506: With 6 Gigabit interface and a SATA hard disk of 500 GB for logging and mail

Supports Performance categories C/D/E/F/G/H

AG 5526: With 6 Gigabit interface and a Solid State disk of 64 GB for logging and mail

Supports Performance categories C/D/E/F/G/H
